

ENE continues to reduce carbon footprint

As part of our commitment to reduce carbon footprint, ENE Group recently switched all the internal and external lighting at its factory and headquarters in Banbridge to LED lighting. This investment will significantly reduce our energy consumption from lighting, resulting in a carbon saving of 10 tonnes of CO2 per annum.

This investment is only the latest in ENE's ongoing sustainability programme, to optimise energy efficiency, minimise waste, make the best use of resources and reduce environmental footprint.

Eric Niblock, Managing Director, ENE Group commented "We are delighted to have completed this latest project as part of our sustainability programme. We are committed to reducing our carbon footprint and are continually looking at ways of improving our offices and processes to make them more environmentally friendly. We will be rolling this latest project out across all our sites."

About ENE Group

ENE Group, established in 1996, is headquartered in Banbridge. ENE has four sites spanning across the UK and EU providing solutions to the food and drinks industry along with the pharmaceutical industry. ENE is a leading manufacturer of stainless steel conveyor systems, stainless steel labelling systems and replacement conveyor belts. With their qualified and experienced engineers, ENE can provide tailor made and innovative solutions to cater for specific client needs.
